1. Project Overview

Objective

OrangeHRM is a web based Human Resource Management System used for managing employee information, recruitment, leave management, and administrative operations. This document defines the business requirements for the Login module, which serves as the entry point to the application.

The OrangeHRM Login module enables registered users to securely authenticate themselves before accessing the Human Resource Management System.

The system validates user credentials and grants access based on successful authentication.

2. Business Objective

The purpose of the Login module is to:

- Allow authorized users to access the application.
- Prevent unauthorized access.
- Protect sensitive employee information.
- Provide a simple and secure authentication process.

3. Scope

In Scope

The following functionality will be tested:

- Username field
- Password field
- Login button
- Forgot Password link
- Successful Login
- Invalid Login
- Required field validation
- Session creation after successful login
- Logout functionality

Out of Scope

The following functionality is excluded:

- User Registration
- User Profile
- Employee Management
- Leave Module

- Recruitment Module
- Payroll
- Admin Module

4. User Roles

Role	Description
Admin	Accesses all available modules after successful login
ESS User	Accesses only authorized employee features

5. Functional Requirements

Requirement ID	Priority	Requirement
FR001	High	The system shall allow users to log in using a valid username and password.
FR002	High	The system shall deny access when an invalid username or password is entered.
FR003	High	The Username field shall be mandatory.
FR004	High	The Password field shall be mandatory.
FR005	High	The system shall display an appropriate error message for invalid login attempts.
FR006	High	Upon successful authentication, the user shall be redirected to the Dashboard page.
FR007	Medium	The user shall be able to log out successfully from the application.
FR008	Medium	The Login page shall provide a "Forgot Password" option for password recovery.
FR009	High	The application shall terminate the active session after the user logs out.
FR010	High	The application shall restrict unauthenticated users from accessing secured pages.

6. Business Rules

The Login module shall comply with the following business rules:

- Only registered users with valid credentials are allowed to access the application.
- Both Username and Password fields are mandatory.
- Password characters shall remain masked while typing.
- Users shall not access internal application pages without successful authentication.
- After successful login, users shall be redirected to the Dashboard.
- After logout, users shall be redirected to the Login page.
- Browser Back navigation shall not allow access to authenticated pages after logout.
- Error messages shall not disclose whether the username or password is incorrect to maintain security.

7. Non-Functional Requirements

ID	Requirement
NFR001	The Login page shall load within 3 seconds under normal network conditions.
NFR002	The application shall support the latest versions of Google Chrome, Microsoft Edge, and Mozilla Firefox.
NFR003	Password input shall be masked to protect sensitive information.
NFR004	User sessions shall be maintained securely throughout the authenticated session.
NFR005	The application shall use HTTPS for secure communication.
NFR006	The Login page shall display properly on common desktop screen resolutions.
NFR007	The application shall remain available during normal business hours with minimal downtime.

8. Assumptions

The following assumptions are considered during testing:

- The test environment is stable and accessible.
- Test user credentials are available before execution begins.
- The application server and database are functioning normally.
- Internet connectivity is available throughout the testing period.
- Required browsers are installed on the test machine.
- No major application changes will occur during the testing cycle.

9. Constraints

The following constraints apply to this project:

- Testing is limited to the Login module.
- Mobile application testing is excluded.
- Third party authentication methods such as Google Login or Microsoft Login are not included.
- Performance and security penetration testing are outside the scope of this project.
- Source code access is not available to the QA team.

10. Acceptance Criteria

The Login module will be considered accepted when all the following conditions are met:

- Users can log in successfully using valid credentials.
- Invalid login attempts are rejected with appropriate validation messages.
- Mandatory field validations function correctly.
- The Forgot Password feature is accessible from the Login page.
- Successful login redirects the user to the Dashboard.
- Logout ends the active session successfully.
- Secured pages cannot be accessed after logout.
- No High or Critical defects remain open at the end of testing.
